◆ Best paper will be awarded from each session.

ICHRS SPONSORED INTERNATIONAL SEMINAR

ON

Water Challenges : From Ancient
to Contemporary Times
and Beyond
Hybrid Mode (Both Online and Offline)

Organised by :

DEPARTMENT OF
HISTORY | POLITICAL SCIENCE | GEOGRAPHY
Tezpur College, Tezpur

Seminar Venue : Tezpur College

27-28th FEBRUARY, 2026

About the Seminar

Water is a fundamental source of sustainable development, socio-economic development, energy, food production and livelihood. From the time immemorial water has been the focal point of numerous progress and problems. Throughout the annals of human history, water has played an indispensable role in shaping civilisations, influencing culture, and sustaining existence. Throughout history, water has held a symbolic, cultural and economic significance for various civilisations. Civilisations have thrived near fresh water sources such as rivers and lakes, as these provided the essential elements for agriculture, drinking water and transportation. Ancient societies revered water as a symbol of life, often attributing divine qualities to rivers, lakes, and oceans. The seminar will delve into the historical importance of water in ancient civilisations such as Mesopotamia, Egypt, and the Indus Valley where water was central to agriculture, trade and religious beliefs. It will examine how the management and control of water resources often led to conflicts and the rise and fall of empires. The intricacies of water-related challenges have evolved significantly from ancient to contemporary times, and as we stand on the verge of the future, the world faces an uncertain path regarding the sustainable management of this invaluable resource. In the contemporary era, we find ourselves grappling with an entirely new set of water challenges.

Water scarcity, pollution and access to clean water have become critical issues, affecting billions of people worldwide. Water challenges are inherently intertwined with social and economic dynamics. The uneven distribution of water resources can lead to social disparities and conflicts, a fact that has persisted through time. Domestic and international politics surround water issues because of the confrontation occurred over the inequality of water distribution, weak management of water resources and skilled practices related to water degradation. International organisations like the United Nations, World Water Council, Pacific Institute have been working in the field of water to ensure a world with universal access to clean and available water. Further study and research over this issue will be helpful in finding innovative ways and solutions for the water challenges world is facing today.

This seminar aims to provide a comprehensive examination of the historical, environmental, social and technological aspects of water challenges. The discussion will also delve into the projections for future water challenges in the face of climate change, population growth and urbanisation.

Sub Themes:

- Water challenges of Indus Valley Civilisation
- Conflict of Kingdoms for Doabs during Ancient and Medieval India
- Challenges posed by rivers in shaping the civilisations
- Challenges of Water storage and usages (e.g.– Vijaynagar kingdom, Ahom kingdom)
